

VENUE

S. KOREA

SEOUL

There's absolutely no question about this venue being categorised as a dance club or disco. On leap day, February 29th this year, Seoul's newest club opened - grandly featuring Canadian pioneering electro-meister, John Acquaviva. Since then some of the highest profile Korean and international DJs - Tiesto, Junior Vasquez and Darren Price to name just a few - have already graced this hallowed (by clubbers) seven-metre high venue. It is reportedly the brainchild of DJ Sin with O2 Productions. Sin was the main DJ at Seoul's legendary Juliana's and the same person who first recommended the Funktion-One system for Club Spot, it was a no brainer that F1 would also be selected for Club Volume.

Physically attached to the Crown Hotel an institution in Itaewon (a district that was once notorious for its somewhat less respectable night clubs and bars), this is by no means a typical hotel club, in fact the venue is run independently by O2 Productions and South Wave Media. Club Volume was created and conceptualized for "world class DJs, fashion, passion, and an evolving luxurious life style." The partially underground club has two-storeys and caters to a capacity crowd of up to 1500 when packed.

A four-way divided control system was installed producing 12 individual patterns to enable live visuals - a first for Korean night clubs. VOLUME also features 8mm LEC chips and a 15meter LED screen pillar and a 60 meter wide LED wall behind the DJ console that showcases Japanese Motion Dive software presented by Korea's leading VJs. Not only but also there's a 10W Sollinger Laser and an interactive I-Bar & I-Wall developed and produced by Mindstorm UK, who first debuted in Asia at Bangkok's Twisted Republic.

The Funktion-One system was designed by SOUNDUS and installed by AT Media who have also done major installs including ▶

TECHNICAL INFORMATION

LIGHTING

1 x Laser Animation ARC-LB SERIES5000 laser system; 1 x Laser Animation DSP COMPACT laser controller

SOUND

12 x Funktion-One RES5 speaker; 6 x Funktion-One F221 sub; 2 x Funktion-One RES2 DJ monitor; 2 x Funktion-One F118 DJ monitor sub; 3 x Funktion-One X01 speaker management; 4 x Funktion-One RES2 2ND floor speaker; 10 x Funktion-One F88 VIP room wall speaker; 3 x MC2 Audio E15 amp; 9 x MC2 Audio E25 amp (HF); 3 x MC2 Audio E45 amp; 6 x MC2 Audio MC1250 amp; 6 x MC2 Audio T-1000 amp; 4 x MC2 Audio T-500 amp; 1 x Aviom AN-16/i audio dist module; 5 x Aviom AN-16R audio dist out-module; 1 x BBE Sound 882i sonic maximizer; 5 x BBE Sound DS24 speaker management; 1 x BSS SW9088iML digital management

► Hanmaum Hall (Daehan Investment Stock), Conference Centre for Video at Kyunggi University and Youngdong Stadium. SOUNDUS informed **mondo*dr** that before opening Volume opened. O2 Productions had gained experience putting on special dance music events at diverse locations around Seoul and become familiar with various leading sound systems, finally concluding that "among those systems Funktion-one was the best of all (for them) and was eligible for club music". Being attached to the Crown Hotel, sound containment was a major issue. In order to overcome this, vibration-proofing and soundproofing were carefully designed by SOUNDUS for the interior, especially the subwoofers which were installed incorporating special equipment custom created to prevent resonance throughout the hotel structure. Upstairs, there are zoned seating and dancing areas with strategically placed Funktion-One Res2s and F88s so that customers in all areas can grok the fullness of the FI sound. **M**

FRANÇAIS

Physiquement attaché au Crown Hotel à Itaewon (un quartier autrefois célèbre pour ses clubs et bars peu respectables), ceci n'est d'aucune façon un club d'hôtel typique. En fait, le club est géré indépendamment par O2 Productions et South Wave Media. Le club VOLUME a été créé et conçu pour "des DJ de classe mondiale, pour la mode, pour la passion et pour un style de vie luxueux en pleine évolution". Ce club partiellement souterrain dispose de deux étages et d'une capacité de 1500 personnes au total. Un pilier de 15m en écran LED et un mur de 60m en LED derrière la console du DJ qui présente le logiciel japonais Motion Dive, présenté par les meilleurs VJ de Corée. Il y a aussi un Laser Sollinger 10W et un I-Bar et un I-Wall interactifs développés et produits par Mindstorm UK, qui a d'abord débuté en Asie à la Twisted Republic de Bangkok. Un système Funktion-One a été conçu par SOUNDUS et installé par AT Media, qui a également réalisé des installations importantes comme le Hanmaum Hall (Stock d'investissement de Daehan), le Centre de Conférence Vidéo à l'Université de Kyunggi et le Stade Youngdong.

DEUTSCH

Physisch an das Crown Hotel, einer Institution in Itaewon (einem Distrikt, der einst für seine eher weniger respektablen Nachtclubs und Bars bekannt war), angebaut, stellt dieser Ort keineswegs einen typischen Hotel-Club dar. Tatsächlich wird das Lokal unabhängig vom Hotel von O2 Productions und South Wave Media geführt. Der Club VOLUME wurde für "Weltklasse-DJs, Mode, Leidenschaft und einen aufkommenden luxuriösen Lifestyle" geschaffen und konzipiert. Der teilweise unterirdisch gelegene Club verfügt über zwei Stockwerke und fasst, wenn er brechend voll ist, eine Menge von bis zu 1500 Personen. Eine 15 Meter lange LED-Bildschirmsäule und eine 60 Meter breite LED-Wand hinter dem Bedienpult des DJs zeigt die japanische Software Motion Dive, die von Korea's führenden VJs vorgeführt wird. Es gibt auch einen 10 W starken Sollinger Laser und eine interaktive I-Bar und I-Wall, die von Mindstorm UK entwickelt und hergestellt wurde. Mindstorm UK gaben im Twisted Republic in Bangkok ihr Debüt. Von SOUNDUS wurde ein Funktion-One-System entwickelt, das von AT Media installiert wurde. Letztere haben große Installationen u.a. in der Hanmaum Hall (südkoreanische Börse), dem Video-Konferenzzentrum an der Kyunggi University und dem Youngdong Stadium durchgeführt.

ITALIANO

Collegato fisicamente al Crown Hotel, una istituzione a Itaewon (distretto una volta noto per night club e bar non proprio rispettabili), questo è senza dubbio un tipico club da hotel, infatti il locale è gestito indipendentemente da O2 Productions e South Wave Media. Il club VOLUME è stato creato e concepito per "DJ, moda, passione e uno stile di vita di lusso in evoluzione di classe mondiale". Il club, parzialmente sotterraneo, ha due piani e ha una capacità massima fino a 1500 persone. Una colonna schermo LED di 15 metri e una parete LED larga 60 metri dietro alla console del DJ dotata di software Motion Dive giapponese presentano i VJ leader in Corea. Ci sono inoltre il laser Sollinger 10W e una parete interattiva I-Bar & I-Wall sviluppati e prodotti da Mindstorm UK, che hanno debuttato per la prima volta in Asia al Twisted Republic di Bangkok. Un sistema Funktion-One è stato progettato da SOUNDUS e installato da AT Media che ha realizzato anche importanti installazioni tra cui Hanmaum Hall (Daehan Investment Stock), centro conferenze video presso l'Università Kyunggi e stadio Youngdong.

ESPAÑOL

Físicamente adjunto al hotel Crown una institución en Itaewon, (distrito que otrora fuera conocido por sus clubes y bares nocturnos poco respetables), éste es de ninguna manera el típico club de hotel. De hecho el local es administrado de manera independiente por O2 Productions y South Wave Media. El club VOLUME fue creado y conceptualizado para "discjockeys internacionales, moda, pasión y un continuo estilo de vida lujoso." El club parcialmente subterráneo cuenta con dos niveles y tiene capacidad de acoger hasta 1500 personas en lleno total. Una pantalla LED de 15 metros y una pared LED de 60 metros de ancho detrás de la consola del discjockey muestran software japonés de movimiento, presentado por los mejores videojockeys de Corea. Existe también un láser Sollinger de 10W y un bar y muro interactivos desarrollados y producidos por Mindstorm UK, quienes debutaron por primera vez en Asia en el club Twisted Republic de Bangkok. SOUNDUS diseñó un sistema Funktion-One que fue instalado por AT Media, quienes también han llevado a cabo instalaciones más grandes incluyendo Hanmaum Hall (Daehan Investment Stock), el centro de video conferencia en la Universidad de Kyunggi y el estadio Youngdong.
